

HTR Software Updates January 1, 2011

The following HTR software programs have been updated with a date of Jan 1, 2011. The programs were released on Dec 22, 2010.

HTR2

- Updated Pars and Track Class for 2011
- Fixed minor bugs and Export (HX4) issues
- Recalibrated Santa Anita for Dirt Surface change

MAXVEL

- Same as above
- Added "2nd Place Finishers" (Place horse) to Modeler as an option checkbox
- Fixed a Problem in the Modeler that now separates AQU inner surface
- Repaired minor bugs and quirks reported by users

HTR TOUR

- Same updates as HTR2
- Adds a potent new tool (see below) [Ultimate Tournament/Longshot]

Ultimate Tournament/Longshot Setup Screen (HTR-Tour)

Full details and commentary on this screen and how to maximize its use will be presented in the Jan/Feb 2011 HTR Newsletter (target date Jan 10, 2011).

A "Setup" clicker is located under the "Ultimate ..." button at the bottom of the HTR-Tour main screen. The Setup screen has numerous options for displaying and organizing a list of horses that includes all of the key longshot markers (\$\$, Tour, Bomb and the *On Demand* horses). The default sort is by post-time, but you may also sort the by the "Grade". The Grade (1-9) is based on probability of winning and "9" is the highest possible and "1" is the lowest. The Setup screen can also be used to filter by post-time, racetrack and ML odds. Together, all the Setup options provide tremendous flexibility over the information and with how you wish it to be displayed.

Robot2

- Will be updated in mid-January (concurrent with the Jan newsletter)
- Adds several interesting new filters including Day of the Week and the 12-Months
- Synchronizes all output 100% with the other HTR programs and Export
