

Upgrading to the Latest Version of HTR2 Software

- Be sure you have the DEMO installed or a previous version of HTR2 working before downloading the upgrade. (See below if you are installing HTR to a new computer).
- Re-boot the computer before using the step-by-step instructions below. This ensures that previous versions of HTR2 are cleared from local memory.

STEP 1

Click the link below to connect to the HTR2 update file

<http://www.homebased2.com/km/dnl/htr2.exe>

STEP 2

When a box pops up, click SAVE.

STEP 3

Change the destination folder on your computer to **c:\htr** (Local Drive: **C**; **HTR** folder)

This is usually shown as the “SAVE IN” or “SAVE AS” box. Make sure that the **HTR** folder is showing as the destination before you download.

STEP 4

Click the SAVE button on the bottom right. You will be prompted to “replace” the previous version. Click YES or OK. The file should now download. After it is finished downloading, click the binoculars “HTR2” icon and see if it runs and that the latest version date is showing. If it is, you are done.

Trouble-Help!

If you try to run your new version and an error message comes up from Windows, take the following action.

- Re-boot the computer.
- Click MY COMPUTER from your desktop or from your START button.
- Dbl-Click on Drive: **C**
- Locate the **HTR** folder on the list. Dbl-click on the **HTR** folder.
- Scroll down the list of files until you find **HTR2.exe** on the display. File names are listed alphabetically, so scroll down until you find it. Often the binoculars are shown with the file.
- Right-click on the HTR2.exe file / Click DELETE.

Now re-boot the computer once more and then follow steps 1-4 above. However, you won't be asked to “replace” in step 4 as the older file has been deleted.

Still won't run or installing HTR on a new computer

If all else fails, take the following action to remove HTR2 from the computer first.

- Click START / CONTROL PANEL / Add-Remove Programs
- Find HTR2 on the list and click “REMOVE” or “DELETE” button to uninstall it.
- Click this DEMO link: <http://www.homebased2.com/km/dnl/setup.exe>
- Click RUN or OPEN. Follow the installation through by clicking NEXT or OK
- Re-boot computer and follow steps 1-4 above.

Note: If installing to a new computer, skip the first two items above and go directly to the DEMO download link.
